

# LOGISTICS COMMUNITY OF INTEREST

2010 Inventory Management Series Competency-Based Learning Map and Training Strategy

Published 2016

### **Inventory Management Competency-Based Learning Map Overview**

The United States Marine Corp (USMC) Logistics Community of Interest (COI) developed this competency-based learning map to support 2010 inventory management series professional development of technical competencies and training. This learning map is organized by a group of competencies, which together define successful performance in the 2010 inventory management series. Competency-based learning maps are essential resources for career development and useful for identifying the knowledge and skillsets you, an employee of the USMC, need to excel and advance in your professional role.

Learning maps are comprised of several components, described in Table 1 below:

Table 1. Components of a Competency-Based Learning Map

Competency Titles and Definitions	Describe the capabilities required for success within a particular position or job role		
Proficiency Target Levels	Define different levels of performance (Entry, Journeyman, Expert) within a competency area		
Behavioral Indicators (BIs)	Examples of activities performed by an individual that illustrate how a competency is demonstrated at varying levels of proficiency: Entry, Journeyman, and Expert. This document does not define all BIs required for 2010 positions.		
	Mandatory: Training required to be completed based on Federal, State, or Marine Corps requirements/regulations  Recommended: Core, Core-Plus, and Sustainment training identified to enhance performance in competency areas		
Training	<ul> <li>Core: Initial training that all personnel should have in related position from entry to senior levels</li> </ul>		
	<ul> <li>Core-Plus: Advanced training that is necessary for career progression that all mid-senior personnel should have in addition to the core training. Core-Plus training is recommended for personnel from General Schedule (GS)-11 to GS-14</li> </ul>		
	<ul> <li>Sustainment: Training intended to maintain credentials or a good training course to have, but not necessary for career advancement</li> </ul>		

### **Inventory Management Series Defined**

This series includes positions that involve analytical work in managing, regulating, coordinating, or otherwise exercising control over supplies, equipment, or other material. The work includes one or more phases of material management including initial planning, provisioning and requirements determination, acquisition and distribution, accountability, and ultimate issue for consumption, retention, or disposal. The work requires knowledge of acquisition processes, automated records and control systems, material substitution criteria, and storage, issue, and disposal processes.

Included in this series are positions the principal duties of which involve analytical work in managing and controlling material. Employees apply knowledge of systems, techniques, and underlying management concepts for determining, regulating, or controlling the level and flow of supplies from initial plan through acquisition, storage, issue, and utilization or disposal. In addition, knowledge of specific programs is used by some employees who specialize in providing the material support needs peculiar to assigned items of equipment, weapon systems, or special programs such as construction, maintenance, or modification.

### **Competency Areas**

Six competencies have been identified for the successful performance in the 2010 series:

Supply Planning
 Sourcing

2. Inventory Management 5. Records Management

3. Forecasting & Demand Planning 6. Customer Service

### **Proficiency and Skill Band Definitions**

The Proficiency Rating Scale (Table 2) below details the rating given for each level of proficiency and its corresponding definition. Proficiency levels describe the degree of competency required to perform a specific job successfully; these levels relate to the work required for a specific job. Different jobs require different levels of proficiency for successful performance. The proficiency levels provided in this learning map indicate the minimum proficiency target for successful performance.

**Table 2. Proficiency Rating Scale** 

1	1 Basic No Proficiency Conceptual Knowledge Only/No Experience		Conceptual Knowledge Only/No Experience	
2	Applied	Low Proficiency	y Able to Apply with Help	
3	Intermediate Moderate Proficiency Able to Apply Autonomously		Able to Apply Autonomously	
4	Advanced	High Proficiency	Proficient/Able to Help Others	
5	Expert	Very High Proficiency	Expert Knowledge	

The USMC COIs have outlined a career progress structure that more accurately reflects the change in your abilities and responsibilities over time. That structure is called the Skill Level Structure (Table 3). It is associated with each occupational series and follows you from the time you are an entry-level employee until you attain the level of a management employee. Career progress in the USMC has traditionally been based on the federal government pay schedule system. The ratings within the pay schedule system are associated with Job Skill Levels:

Table 3. Skill Level Structure

Job Skill Level	Definition	Pay Plan	<b>Beginning Grade</b>	Target Grade
1	Entry	GS	7	9
2	Journeyman	GS	11	12
3	Expert	GS	13	14

### **Behavioral Indicators (BIs)**

It is important to define how competencies are manifested at different skill levels. Behavioral Indicators are on-the-job examples of behaviors and activities that illustrate how a competency is demonstrated at varying skill levels and provide an objective description of the behavior that can be observed in an individual as evidence that they either have or do not have the skills at the required level needed for the competency. These are examples of what the competency could look like at varying skill levels and are not inclusive of all behaviors demonstrating the competency for each skill level. This information is provided as a tool to help guide evaluations of employee proficiency; however, it should not be used as a checklist for employees' behaviors.

### **Training & Certifications**

The training courses found in Table 4 and throughout this learning map are recommended (Core, Core-Plus, and Sustainment) and may not be inclusive of all training available. Training titles and vendors are subject to change as the courses evolve. Additionally, there are several external resources (Defense Acquisition University (DAU), MarineNet, Learning Tree, Lynda.com, etc.) that provide a variety of training opportunities available to all personnel for professional knowledge and skill enhancement.

#### Table 4. 2010 Training

#### Core (All Levels)

- ACQ 101 Fundamentals of Systems Acquisition Management
- ADMB7003D Customer Service Excellence
- BCF 106 Fundamentals of Cost Analysis
- CLC 011 Contracting for the Rest of Us

Core Sustainment Training	Core-Plus Sustainment Training
Defense Distribution Management – Modified	Defense Distribution Management

Certifications are another practical option for formalizing a specific competency or skillset. The Logistics COI has identified several certifications (Table 5) that are applicable to the 2010 series. While these certifications are not required, staff are encouraged to complete these programs to improve and formalize their skillsets. However, some certifications below may be required according to your command and billet. Work with your supervisor to ensure you meet command certification training requirements.

**Table 5. Certifications**
